Crime Scene Investigation Equipment Ltd is a small family run business based in the beautiful County of Buckinghamshire, South East England. We are the oldest established company in the United Kingdom specialising in the manufacture and supply of quality materials for the Fingerprint, Scene of Crime and Forensic Investigator.

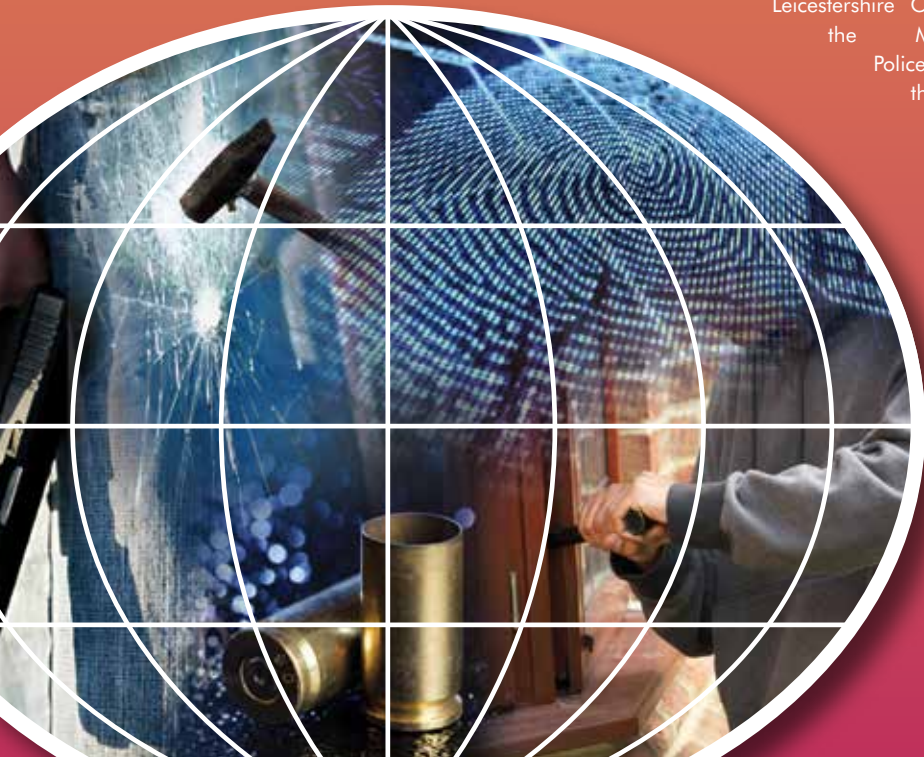

Staffed by ex-members of the Police and Security Services (British Military) we have a wealth of knowledge and expertise in all aspects of criminal and forensic investigation and therefore fully understand the problems and difficulties encountered by our customers.

It's for this reason, that for many years, we have continued to invest in new products and services that allow our customers around the world, to detect, apprehend and prosecute those individuals who choose to live outside the law.

Those products include the introduction of Magneta Flake™ probably the only powder manufactured specifically for the recovery of latent fingerprints and now fast becoming the preference with many Law Enforcement Agencies. A 'Dark' form of Magneta Flake™ for use on lighter surfaces has now been developed in conjunction with the University of Central Lancashire with additional funding from EPSRC and at this time research is continuing into the use of 'Nano' powders.

Our 'state of the art' electrostatic dust lifting device 'Pathfinder Omega', specifically designed with operator safety in mind, is without doubt the safest ESL on the market today. 'Pathfinder Omega' proved so popular in its ease of use, that the need arose for a specialist footwear system to help footwear examiners store, search and archive those footwear marks lifted from crime scenes. Available systems were deemed costly and ineffective, so IFIIS™ (Integrated Forensic Identification and Intelligence System) has been introduced.

With practical assistance from
Leicestershire Constabulary,
the Metropolitan
Police in London,
the British

Military, the Taipei City Police Service in Taiwan and several Agencies within the United States, this has proved to be a cost effective solution for Police Agencies around the world.

IFIIS™ is now available and incorporates Footwear, Tyre Track and Glove Mark databases. Continuous development with UK Police Agencies is currently being undertaken in order to add additional forensic databases.

Because of our wealth of experience we also offer practical courses on many topics including 'Drug Detection', 'Forensic Intelligence Techniques and Awareness', 'Footwear Refresher Course', 'Forensic Digital Photography', all of which have been developed with the investigator in mind, but at affordable prices that will not impact a Police Agency or Department's ever shrinking budget.

Our commitment to customer care and attention to detail means we are constantly seeking to manufacture and supply the best equipment possible to aid our customers in the never ending fight against crime. This catalogue, however up to date, cannot include all the items available. Therefore please feel free to contact us to discuss your requirements as we will be happy to research and advise on your behalf.

Crime Scene Do Not Enter

75mm wide x 25m/100m/250m long

High quality, non-adhesive plastic tape printed with the words 'CRIME SCENE DO NOT ENTER'

| LENGTH | CODE |
|--------|-------|
| 25M | 95007 |
| 100M | 95000 |
| 250M | 95004 |

This tape is primarily used for crime scene protection or other areas where forensic work needs to be carried out or is still ongoing. Ideal for educational establishments i.e. schools, colleges, etc, and your own personal CSI kits.

Simply unroll the plastic tape and it can then be tacked, stapled, wrapped or tied around suitable objects to create an instant and highly visible barrier.

Note: CSI can also manufacture tape with your own department's logo, text or design. Contact our sales department for more information.

Police

75mm wide x 100M long

High quality, non-adhesive plastic tape printed with the words 'POLICE'

This tape is ideal for crime scene protection, crowd control and other areas where there could be potential hazards.

Simply unroll the plastic tape and it can then be tacked, stapled, wrapped or tied around suitable objects to create an instant and highly visible barrier.

Note: CSI can also manufacture tape with your own department's logo, text or design. Contact our sales department for more information.

| CODE |
|-------|
| 95002 |

Police Do Not Cross Tape

75mm wide x 250M long

High quality, non-adhesive plastic tape printed with the words 'POLICE DO NOT CROSS'

This tape is ideal for crime scene protection, crowd control and other areas where there could be potential hazards.

Simply unroll the plastic tape and it can then be tacked, stapled, wrapped or tied around suitable objects to create an instant and highly visible barrier.

Note: CSI can also manufacture tape with your own department's logo, text or design. Contact our sales department for more information.

| CODE |
|-------|
| 95001 |

Red and White Chevron

75mm wide x 500m long

High quality, non-adhesive plastic tape printed red and white along its length. Ideal for cordoning off areas where there could be potential hazards.

Simply unroll the plastic tape and it can then be tacked, stapled, wrapped or tied around suitable objects to create an instant and highly visible barrier.

Note: CSI can also manufacture tape with your own department's logo, text or design. Contact our sales department for more information.

| CODE |
|-------|
| 95006 |

Biohazard

High quality, adhesive plastic tape printed with the words 'BIOHAZARD' and incorporates the universal biohazard symbol. This tape is for the securing of evidence in bags or boxes or other mediums thereby alerting other people of any potential dangers (it is not tamper evident).

Note: CSI can also manufacture tape with your own department's logo, text or design. Contact our sales department for more information.

| WIDTH | LENGTH | CODE |
|-------|--------|-------|
| 25mm | 66M | 95007 |
| 50mm | 66M | 95012 |

Danger of Infection

25mm wide x 66M Long

High quality, adhesive plastic tape printed with the words 'DANGER OF INFECTION' and incorporates the universal biohazard symbol. This tape is for the securing of evidence in bags or boxes or other mediums thereby alerting other people of any potential dangers (it is not tamper evident).

Note: CSI can also manufacture tape with your own department's logo, text or design. Contact our sales department for more information.

| CODE |
|-------|
| 95010 |

Health Hazard - Do Not Touch

25mm wide x 66M Long

High quality, adhesive plastic tape printed with the words 'HEALTH HAZARD-DO NOT TOUCH' and incorporates the universal biohazard symbol. This tape is for the securing of evidence in bags or boxes or other mediums thereby alerting other people of any potential dangers (it is not tamper evident).

Note: CSI can also manufacture tape with your own department's logo, text or design. Contact our sales department for more information.

| CODE |
|-------|
| 95011 |

Boundary Tape

15mm wide x 30M Long

Primarily used in conjunction with our Crime Scene Flags. These tapes are ideal for marking boundaries and edges of search areas. These bright colors are easily recognised in crime scene photographs and videos.

| COLOUR | CODE |
|--------|-------|
| RED | 95018 |
| YELLOW | 95017 |
| GREEN | 95019 |
| BLUE | 95020 |

Crime Scene Flags

127mm x 102mm (5" x 4")

The job of searching for small pieces of evidence or fragments of human remains is not easy and never pleasant.

So mark them boldly with these coloured flags. They are ideal for marking boundaries, edges of search areas or pinpointing the location of evidence etc. especially where barrier tape cannot be readily secured.

They can be used in conjunction with our coloured Boundary Tapes and Disposable Photo Markers.

Supplied in packs of 10.

| COLOUR | CODE |
|--------|-------|
| RED | 95016 |
| YELLOW | 95015 |
| BLUE | 95076 |
| GREEN | 97977 |

Fragile

50mm wide x 66M Long

High quality, adhesive plastic tape printed with the words 'FRAGILE'. This tape is for the securing of evidence in bags or boxes or other mediums thereby alerting other people to the fragility of the contents (it is not tamper evident).

CODE

96488

Broken Glass

50mm wide x 66M Long

High quality, adhesive plastic tape printed with the words 'BROKEN GLASS'. This tape is for the securing of evidence in bags or boxes or other mediums thereby alerting other people to the possible dangers of the contents (it is not tamper evident).

CODE

96487

Evidence Sealing Tape

50mm wide x 66M Long

High quality, adhesive plastic tape printed with the words 'EVIDENCE'. This tape is for the securing of evidence in bags or boxes or other mediums (it is not tamper evident).

CODE

96486

Pony Hair Brushes

Made with soft pony hair, these are a very popular and economical, fingerprint brush.

Each brush is supplied in a clear plastic tube to assist storage and avoid damage to bristles.

| SIZE | CODE |
|-------|-------|
| SMALL | 95101 |
| LARGE | 95103 |

Squirrel Hair Brushes

These are excellent soft haired brushes made from select grade, super soft, pure squirrel hair.

Each brush is supplied in a clear plastic tube to assist storage and avoid damage to bristles.

| SIZE | CODE |
|-------|-------|
| SMALL | 95109 |
| LARGE | 95111 |

CSI Specialist Fingerprint Brush

A high quality, dome headed, handmade brush, manufactured by blending up-to-date technology with traditionally crafted skills.

At CSI we aim to provide our profession with a variety of brushes that permit even the faintest print to be developed with minimal distortion.

This is an excellent soft haired brush made from select grade, super soft, pure squirrel hair. It has a smaller handle and thicker brush head than our 95111 Squirrel Haired Brush.

Each brush is supplied in a clear plastic tube to assist storage and avoid damage to bristles.

| CODE |
|-------|
| 95108 |

Camel Hair Brush

Small soft haired brush ideal for cleaning up marks when they have been over powdered. (Often referred to as the 'Brushing Out' technique).

This brush is also ideal for use with powders such as Stickyside powder (No. 95340), Wetwop Black (No. 95348) and Wetwop White (No. 95349) when painting onto the back of adhesive tapes.

CODE

95123

Mixed Hair Brush

A combination of soft squirrel and pony hair.

A popular brush combining the fan shape bristles with the more conventional 6"/150mm handle like those on our 95103 and 95111 range of brushes.

CODE

95122

Maribou Feather Brush

Traditionally styled brush with fluffy Maribou head.

This applicator is recommended for dusting with Fluorescent Powders where a progressive buildup of powder is required.

Handle and Maribou head colour may vary.

CODE

95132

Squirrel Hair (Zephyr) Brush

Custom made for CSI this deluxe brush is styled on the Original Zephyr with its ultra-thin handle but the fibreglass filaments have been replaced with super soft squirrel hair.

The same twirling technique can be used and due to it being animal hair, is less disastrous if it becomes wet, provided it is left to dry naturally.

CODE

95121

CSI Synthetic Brush

Once again based on the Original Zephyr this brush is composed of a brown superfine synthetic filling and is often referred to as the 'Washable Zephyr' as it can be cleaned thoroughly with warm soapy water with no distortion to the brush.

Composed of an aluminium ferrule, 6" handle and 15mm diameter. Visible length 58mm.

CODE
95133

CSI Zephyr Brush

This Zephyr style brush is made exclusively for fingerprint purposes and is distinctive in most crime scene cases. Shaped to pick up and retain a supply of fingerprint powder this brush is very effective when used with a twirling, rotating motion, especially on flat horizontal surfaces such as counter tops etc.

Every brush is hand made from a thousand fibre bundles each of these being composed of over a hundred individual treated glass filaments. To ensure softness any coarse fibres

have been removed and softness will improve with use. However, do not allow the Zephyr brush to become damp with water, dew or condensed moisture on cold bottles or cans. It is for use with dry powders on dry surfaces. Do not use on greasy surfaces.

CODE
95120

Magnetic Brush

For use with magnetic powders. The magnetic applicator is the cleanest form of powder application and causes least possible damage to the fragile fingerprint.

Through our experience we now offer only spring loaded magnetic brushes which allow for examination of both vertical and horizontal surfaces. This also ensures maximum recovery of powder.

This magnetic fingerprint brush is made of rigid plastic, is spring loaded and has good powder holding capability due to the powerful magnet encased within its structure.

Easy to handle, with a thick ridged shaft to improve grip ability.

CODE
95151

Deluxe Magnetic Brush

For use with magnetic fingerprint powders. The magnetic applicator is the cleanest form of powder application and causes the least possible damage to the fragile fingerprint. This particular brush has been fitted with rare earth magnets thereby allowing the mark to be cleaned up giving a better defined print especially when used in conjunction with CSI Magneta Flake Fingerprint Powders, both Light and Dark and the new CSI 'Nano' Powder range of powders.

CODE

95150

CSI Blower Brush

Ideal for processing large areas. This applicator has its own powder reservoir connected to a rubber puffer bulb which when pressed doses the marabou feather head. The heads are interchangeable but the specific light bodied 'blower' powder must be used to avoid clogging.

CODE

95130

Suitable powders can be found in our 'Powders' section of this catalogue.

Bio-Foam

A unique system for the taking of a three dimensional cast of shoeprints. Each BIO-FOAM impression kit comes in a cardboard container which is suitable for storage and will protect the impression.

Directions for use are simple. Press the footwear into the BIO-FOAM and remove the shoe. Spray the impressions with a separating agent i.e. hair spray. You now have an impression that can be cast in the normal way.

| CODE |
|-------|
| 95263 |

Crownstone Plaster

The importance of a good footwear or tyre tread cast is invaluable. Crownstone Plaster gives excellent definition and good colour contrast.

Remember the prepared and mixed casting material must not be poured directly over all areas of the impression, but directed to one side only. Depending upon environmental conditions the actual setting times vary from 20 minutes to about 1 hour 45 minutes.

Using warm water can improve setting times.

| SIZE | CODE |
|------|-------|
| 1kg | 95210 |
| 5kg | 95211 |
| 25kg | 95212 |

Denstone Plaster

The importance of a good footwear or tyre tread cast is invaluable. Denstone Plaster gives good definition and good colour contrast.

As with the Crownstone Plaster the prepared and mixed casting material must not be poured directly over all areas of the impression, but directed to one side only. Depending upon environmental conditions again the actual setting times vary from 20 minutes to about 1 hour 45 minutes although Denstone usually sets a little quicker than Crownstone Plaster.

Using warm water can improve setting times.

| SIZE | CODE |
|------|-------|
| 1kg | 95215 |
| 5kg | 95216 |
| 25kg | 95217 |

Plastic Casting Frame

Adjustable plastic frame to contain plaster mixes required for either footwear or tyre marks at the crime scene.

This rigid plastic frame comes complete with pre formed corners and straight sections which are simply clipped together by the use of heavy duty press studs.

It is a versatile frame allowing you to shape the desired size of cast required.

CODE

95260

Mixing Spatulae

A solid wooden handle and a stainless steel blade makes this an ideal instrument for the mixing of impression and casting compounds.

CODE

95251

Mixing Bowl

Flexible re-usable mixing container for use with CSI casting plasters. Even if the plaster has hardened in the bowl, the plaster can be crushed for easy removal and cleaning.

| SIZE | CODE |
|-------|-------|
| Small | 95242 |
| Large | 95243 |

CSI Easy-Mix Putty

A high definition polyvinyl siloxane impression material. Pre measured for quick and easy usage at a crime scene. Ideal for use in conjunction with our impression material (97163) when doing tool marks as it helps in building a frame round the mark so you can get even finer detail.

Two x 20gm tins, one putty (Green) and one hardener (Grey) clearly labeled, are mixed together to give a good impression.

CODE

95204

Provil Putty

2 x 450ml Tubs of Provil novo silicone high quality impression material used for making replicas for surface testing. Boxed and includes 2 colour coded dispensing spoons.

Supplied as base (colour-green) and catalyst compositions (colour-grey) and can be mixed or kneaded manually in a 1:1 ratio.

All Provil novo articles excel in their highly accurate reproduction of surface detail for reproducing toolmarks. Perfect dimensional stability and resistance to deformation.

Total Mixing time: 45 seconds. Total Working time: 2 minutes. From start of mixing to setting time: 5 mins. (Setting times can be affected by temperature).

CODE

95224

Mikrosil

Mikrosil has been formulated to give excellent rendering of small details, highest contrast for microscopical observations, good releasing ability and short setting time.

Ideal for use on toolmarks, firing pin marks and dusted fingerprints where a regular lifting tape will fail.

These properties are of special importance with shallow marks and those with small details requiring large magnification. It is also suited for lifting developed latent fingerprints from textured surfaces.

Setting times: 5-8 minutes at 68 degrees Fahrenheit 12-15 minutes at 14 degrees Fahrenheit. The setting time can be shortened by increasing the amount of hardener or lengthened by decreasing it. Do not add more than 6% hardener.

Generally squeeze out equal lengths of Mikrosil and hardener when using this product.

CODE

95201

Xantopren

Often there is only one opportunity to record a piece of physical evidence i.e. footprint/tyreprints/toolmarks and it is vitally important that you are able to match the impression with the actual object making the impression.

CSI have a selection of materials for the recording of physical evidence at crime scenes which is based upon the experience of serving crime scene investigators.

This product is a light bodied, low consistency, silicone based impression material. Its light blue colour is ideal when being photographed.

Total working time 1 min 30 secs including mixing of 30 seconds. Setting time 5 minutes in normal conditions. Activator is included in our price.

CODE

95200

Forensic Impression Gel

Making imprints has never been so quick and easy to do. Brown colored CSI Forensic Impression Gel has been specially formulated for use by Crime Scene Investigators and Forensic examiners.

It is non-toxic, shrinkproof and gives great definition of toolmarks. CSI Forensic Impression Gel is a top class product which sets a new standard in the field of casting.

This product is extremely easy to use. The especially developed mixing tip prevents air bubbles in the impression material and ensures a flawless dosage of catalyst and casting putty. CSI Forensic Impression Gel allows you to accurately adjust the amount of impression material to any situation and therefore prevents unnecessary loss of material.

This product contains one third material more than you will find in conventional tubes which makes it extremely cost effective.

To be used in conjunction with product code 97162 and 97164.

CODE

97163

Mixing Tips

CSI Forensic Impression Gel Mixing Tips supplied in bags containing approximately 10 tips.

CODE

97164

These tips ensure the correct mixing ratio of silicone and hardener and directs the putty to the area under analysis.

For use with product code 97163.

Dispensing Gun

This gun allows for the automatic mixing of silicone and hardener allowing it to be dispensed easily and economically.

CODE

97162

This gun is primarily for use with the CSI Forensic Impression Gel (No. 97163) found in this section but can also be used with other manufacturers 'twin type' dispenser silicone putty's.

Provil Cartridge

Supplied as a 50ml Single Pack - Fast, Regular Set Vinyl Polysiloxane. For use with Provil Gun dispenser.

CODE

95225

(See product code 95223).

Provil Mixing Tips

Provil mixing tips supplied in bags containing approximately 10 tips.

These tips ensure the correct mixing ratio of silicone and hardener and directs the putty to the area under analysis.

For use with product code 95225.

CODE

95226

Provil Gun

This gun allows for the automatic mixing of silicone and hardener allowing it to be dispensed easily and economically.

Please Note: This gun can only be used in conjunction with the provil cartridges (No. 95225) found in this section.

CODE

95223

CSI Casting Kit

The CSI Casting Kit is designed for the casting of tyre and footprint evidence. Housed in a carrying case this kit contains a pre-measured amount of casting powder, water containers, mixing bowl, universal tyre mark/footprint casting frame, mixing spatulae, spoon, Unifix and photographic scale.

CODE

97163

Unifix - 400ml

Lightly spray evenly over the impression with UNIFIX which will thereby penetrate the porous structure of the soil and sand to fix it. It doesn't matter whether the impression is moist or not.

The surface of the impression will then be sealed allowing you to pour the casting material (Denstone or Crownstone) into it and thereby casting the perfect mark

CODE

95232

Adhesive Neutraliser 25ml

This product is ideal for removing adhesive tapes, labels, stickers, postage stamps etc from a variety of surfaces thereby allowing you to use conventional methods to process the adhesive side of the tape in order to look for fingerprints.

Used in accordance with the instructions, you can safely remove objects without damaging the adhesive. The product then evaporates quickly leaving the adhesive ready for developing with further processes such as Stickyside powder or Wetwop.

CODE

93350

Amido Black 25gm

Amido black is a dye which stains protein present in blood and other body fluids to give a blue-black product. It will not detect the normal constituents of latent fingerprints and therefore must be used in sequence with other techniques when blood-contaminated latent fingerprints are examined. It is also absorbed by some porous surfaces and may produce a high background colour.

Effective on porous and non-porous surfaces paper, heavy cardboard, rubber gloves, plain wood, polythene etc. Good results have also been obtained on cadavers.

Care should be taken when dealing with porous substrates as the dye may be absorbed.

It is recommended that photographs be taken of the bloodstains before treatment with Amido Black.

CODE

93542

Ardrox Dye 1ltr

Ardrox is a fluorescent liquid dye which works well with lasers, forensic light sources and even UV lamps.

Ardrox can be used full strength or diluted with either Methanol or Ethanol.

Although Ardrox developed prints fluoresce under 365nm, better results have been reported while examining evidence with 450 - 480nm light.

CODE

93546

Basic Yellow 25gm

A fluorescing dye stain which can be used for improving superglue developed fingerprints.

Basic Yellow 40 (Panacryl brilliant flavine) has been found to be one of the most sensitive stains and fluoresces well between 365nm and 485nm.

CODE
95343

Gentian Violet 25gm

Gentian Violet is a dye which stains the fatty constituents of sebaceous sweat producing an intense purple image. It is very effective for the development of latent fingerprints on the adhesive surface of adhesive tape and decorative or protective films.

It will also develop fingerprints on some other surfaces, particularly those contaminated with oils and grease. Also effective on small non-porous surfaces such as crockery.

Do not use on porous materials i.e. wood, paper, card.

This reagent is easy to use but please note that this product is toxic by swallowing or skin absorptions and should therefore NOT be used in large quantities.

CODE
95341

Ninhydrin Crystals

Ninhydrin is a very effective reagent for paper and some other porous surfaces. It reacts with amino acids and possibly some other components in fingerprints. It produces visible latent fingerprints on surfaces such as cheques, paper documents, bank notes, wood etc.

Simple to use and cost effective as it does not require any additional light sources for examination. Reacts with blood and may be used for developing blood contaminated fingerprints. If used after DFO additional fingerprints may be developed.

Ninhydrin can be used to develop blood contaminated fingerprints on porous and non-porous surfaces. Fingerprints developed with ninhydrin can be made fluorescent by application of zinc chloride.

SIZE
CODE
25gm
95301
100gm
95302

Ninhydrin Spray 120ml

Ready made solution in a handy pump action container rather than an aerosol can. Just pump three or four times to create pressure and then by pressing the nozzle a fine jet of Ninhydrin is released.

Always wear eye protection and a face mask when using this product.

Preferably use this product in a fuming cabinet.

| |

| |
|-------|
| 95344 |
|-------|

SPR (Self Mix) 25gm

Small particle reagent is a suspension of fine molybdenum disulphide particles in detergent solution.

It adheres to the fatty constituents of latent fingerprints to form a grey deposit and is a quick and simple process.

The dish application method is a reasonably sensitive process but is very much more effective on fresh fingerprints than older ones.

The spray application (see No. 95333) is considerably less effective and should be considered only when no alternative is feasible.

The grey powder may be lifted to simplify photography.

| |
|------|
| CODE |
|------|

| |
|-------|
| 95330 |
|-------|

SPR Spray 450ml

Small particle reagent is a suspension of fine molybdenum disulphide particles in detergent solution. It adheres to the fatty constituents of latent fingerprints to form a grey deposit and is a quick and simple process.

This spray application is considerably less effective than the regular dish development technique, but it does have its place when that alternative is not always feasible.

For example this application is ideally suited for use on damp motor vehicles.

The grey powder may be lifted to simplify photography.

CODE
95333

Stickyside Powder 25gm

A powder for developing fingerprints on the adhesive side of most tapes and labels. i.e. packing tape, masking tape, ducting tape, plasters and packing labels etc.

Powder should be mixed with PhotoFlo 200 (see No. 95339) and water and then applied to the tape using a soft hair brush such as our camel hair brush, product code 95123.

Can be used as a replacement to Gentian Violet and superglue although the latter is a far superior process.

CODE
95340

Photo-Flo 200

For use with Sticky-Side powder (product code 95340) which in turn is used for developing fingerprints on the adhesive side of most tapes and labels.

Basically PhotoFlo 200 is added to water and sticky-side powder to form a paste. Current pack size is 16fl oz (473ml)

CODE
95339

Sudan Black 25gm

Sudan Black is a dye which stains fatty components of sebaceous sweat to produce a blue-black image. The formulation contains solid particles of dye as well as dye in solution.

It is less sensitive than some other processes for latent print detection but is of particular use on surfaces which are contaminated with grease, foodstuffs or dried deposits of soft drinks.

It will also enhance superglue developed fingerprints.

CODE
95347

Wetwop Powder - Black

For developing latent prints on the adhesive side of tape. Wetwop comes as a premixed solution and is applied to the surface with a soft hair brush.

Can be used on the following tapes: masking, duct clear cellophane, brown packaging and nylon reinforced strapping.

For an alternative contrast see No. 95349 Wetwop Powder – White

| CODE |
|-------|
| 95348 |

Wetwop Powder - White

For developing latent prints on the adhesive side of tape. Wetwop comes as a premixed solution and is applied to the surface with a soft hair brush.

Can be used on the following tapes: masking, duct clear cellophane, brown packaging and nylon reinforced strapping.

For an alternative contrast see No. 95348 Wetwop Powder – Black

| CODE |
|-------|
| 95349 |

Superglue Liquid

Superglue vapour, ethyl cyanoacrylate, polymerises on some latent fingerprints to produce a white deposit. This polymerisation is thought to be catalysed by water and possibly some other constituents of latent fingerprints. The effectiveness of the process is very dependent on the processing conditions.

Because of the hazards associated with Superglue we would always recommend its use in a fuming chamber. (See No. 97051 CSI Forensic Fingerprint Cabinet).

To prolong the shelf life of this product we suggest storing it in a refrigerator.

| SIZE | CODE |
|-------|-------|
| 25gm | 95318 |
| 500gm | 95317 |

Superglue Cleaning Solvent 250ml

Used to remove any build up of white residue deposits inside fuming chambers and from treated evidence.

Please note this chemical solvent may damage plastics and painted surfaces.

CODE

95321

Superglue Softener 250ml

A ready-made chemical solution used to clean off superglue should it come in contact with the skin.

CODE

95320

Superglue 'Cleanup' Sticks

Superglue vapour, ethyl cyanoacrylate, polymerises on some latent fingerprints to produce a white deposit. This polymerisation is thought to be catalysed by water and possibly some other constituents of latent fingerprints. The effectiveness of the process is very dependent on the processing conditions.

However where 'overfuming' or 'overcooking' has occurred it may be possible to retrieve the mark with these specially formulated 'cleanup' sticks.

Using these unique patented 'cleanup' sticks it is possible to recover a mark and therefore aid its identification. Supplied in packs of 100 they have an unlimited shelf life so it's worth having a pack in the laboratory just in case.

CODE

95322

Foil Dishes

Superglue vapour, ethyl cyanoacrylate, polymerises on some latent fingerprints to produce a white deposit. This polymerisation is thought to be catalysed by water and possibly some other constituents of latent fingerprints. The effectiveness of the process is very dependent on the processing conditions.

These small foil dishes are ideally suited for heating up the superglue thereby allowing the vapour to permeate the exhibits. Supplied in boxes of 100.

CODE

97078

Hotshots Developer

Developed from the U.S. military's heat and eat ration concept, you can now have super-glue fuming in one convenient, disposable container without the sticky mess!

Within a few seconds, the activator solution is absorbed and a chemical reaction takes place, generating heat and a controlled amount of steam needed for humidity. As the canister heats up the HotShot fingerprint developer begins to vaporise and fills the fuming chamber with extremely sensitive, active print developing fumes. Developed prints are whiter and appear much faster due to the activator and the concentrated print developer. One HotShot adequately fumes a fuming tank in four minutes or less.

Each HotShot is self-contained and disposable so there is no mess to clean up. After use simply screw the lid back on the protective container and throw the unit away. Simple to use and ideal for training purposes. Sold singularly.

CODE

97010

Superglue Heater

Superglue vapour, ethyl cyanoacrylate, polymerises on some latent fingerprints to produce a white deposit. This polymerisation is thought to be catalysed by water and possibly some other constituents of latent fingerprints. The effectiveness of the process is very dependent on the processing conditions.

This unit is ideal for the acceleration of the fuming process by heating up the superglue.

Should be used with No. 97078, Superglue foil dishes.

CODE

95319

Portable Fuming Cabinet

A collapsible 12" x 12" x 19" clear perspex chamber which can be used in the field. Hinged joints are secured with Velcro fastenings. Comes complete with carrying case.

For heating units see No. 95319 and for foil dishes see No. 97078.

CODE

95323

AZO Bacterial Wipes

For the control of infection, made from strentex non-woven fabric, saturated with 70% V.V. solution of Isopropyl Alcohol B.P.

Each wipe is approximately 200mm x 200mm square. Each tub contains 100 wipes approx.

CODE

95406

CSI Body Fluid Spill Kit

This kit contains all you need to deal efficiently and effectively with body fluid spills.

CODE

95415

Five individually packed single use kits complete with disposable gloves, apron, FFP2 odour valved mask, absorbent pad, wipes, scoop and scraper, instruction leaflet and disposable bag and tie, in a durable waterproof bag.

Kit also includes 1 x 500gsm Emerzorb gelling powder which absorbs many times it's own weight, minimises odours, and makes cleaning up easier, along with a 1 Ltr bottle of surface sanitiser which is effective against a wide range of bacteria.

Refills are available. Please contact our offices for further details.

CSI Ink Cleaning Solution 250ml

Made from natural vegetable oils, CSI Ink Cleaning Solution is an extremely effective ink remover for use on fingerprint blocks, slabs and rollers. No residue or greasiness is left on surfaces and can be washed off with ordinary tap water. Its non-corrosive, has a low toxicity and there are no waste disposal problems or storage headaches associated with this product.

Do not use on hands/skin

CODE

95428

Forensic Wipes

Powerful individual cleaning cloths for the removal of grease, oil and ground in dirt. Ideal for cleaning fingerprint ink, paints or tar from hands where no water is available. New and improved plastic packaging ensures that wipes will not dry out once opened.

Approximately 100 wipes per pack.

CODE

95420

Hizorb Hand & Face Towels

A refreshing, individually packed hand and face towel manufactured from soft, non-woven material, pre-moistened with pH balanced solution to cleanse and condition the skin. Suitable for both normal and sensitive skins this product can help improve levels of hygiene especially when you have been working at a messy crime scene. Supplied in small packs containing 25 individually foil wrapped wipes.

CODE

97171

Virkon Disinfectant Tablets

Virkon is the ultimate high level surface disinfectant. It is an effective infection control for all laboratory surfaces, equipment and instruments. It has an independent proven efficacy against bacteria over 200 virus spores and fungi.

CODE

95401

Simply drop a couple of tablets in water which will provide a safe working solution with a faint lemon odour. It has proven efficacy against bacteria (including mycobacteria), viruses, spores and fungi in a variety of independent tests using different protocols.

It is safe to use, non-toxic, non-sensitising, biodegradable. It has a low oral and dermal toxicity and no toxic vapour phase. Compatible with a wide range of materials including stainless steel, plastic and rubber.

Each pack contains 10 x 5gm tablets.

Presept Disinfectant Tablets

PRESEPT Disinfectant Tablets take hard surface disinfection beyond the confines of hypochlorites. A complete biocidal spectrum based on the unique action of NaDCC (sodium dichloroisocyanurate) ensures highly effective disinfection even in the presence of blood or other organic matter. And with long term stability in storage, full activity is guaranteed right up to the moment of use. In every department, PRESEPT Disinfectant Products provide a practical, convenient and rational approach to disinfection.

PRESEPT Effervescent Disinfectant Tablets - Making better solutions for disinfection

- Activity across the microbial spectrum, providing protection against many organisms including HIV, Hepatitis B, Herpes viruses and MRSA
- Better activity in the presence of organic matter than hypochlorites and may be used with confidence for all body fluid spillages
- Better biocidal activity than hypochlorites

- Stable and compact in storage, ensuring full biocidal activity up to the moment of use
- Safe, simple and accurate preparation
- Convenient, reliable and economical
- Compatible with certain detergents

Each pack contains 10 x 5gm tablets.

CODE

95401

DRUG AND BLOOD IDENTIFICATION

The NIK® System of Narcotics Identification was developed as a means of rapidly screening and presumptively identifying substances suspected of being illegal drugs. Designed to be a completely self-contained system, each test provides all necessary elements to perform chemical colorimetric tests for commonly known and frequently abused narcotics and dangerous drugs.

- Rapidly identifies substances suspected of being illegal drugs
- Can presumptively identify major drugs of abuse

Simple to use, NIK Pouches contain one to three chemical ampoules in a heavy-duty plastic pouch. This eliminates the need for measuring, mixing and dispensing of reagents. Just place a small sample of the suspect drug in the pouch, break the ampoules and watch for a colour change. A positive colour indicator on the pouch will help interpret the reaction. To see the colour properly, hold the pouch steady in front of the white background. Remember for any test there are four important factors to look for namely 1) Colour, 2) location of colours in the test pack, 3) Change or absence of colour 4) Intensity of the colour. Reagent shelf life is indefinite, but prolonged exposure to strong sunlight or heat should be avoided. Ampoules should be broken through the protective plastic casing in the centre of each vial. DO NOT continue to crush the glass after breaking the vials, as it may puncture the pouch. To mix the reagents simply 'flick' the pouch with your finger, or agitate it gently from side to side.

Each pack contains 10 individual tests except NIK Test O for GHB which contains only 5.

NIK Drug Test - Test A

Marquis Reagent is a primary general screening test for the presumptive identification of Opiates (Morphine, Codeine or Heroin), Demerol, Black Tar, Amphetamine-type compounds including Methamphetamine & Methylenedioxymethamphetamine (MDMA or Ecstasy), Amphetamines and as a general screening agent for other drugs.

| CODE |
|-------|
| 95500 |

NIK Drug Test - Test B

Nitric Acid Reagent is a secondary screening test for the confirmation of Opiates (Morphine, Codeine or Heroin) and Amphetamine-type compound as well as a general screening test for other drugs.

| CODE |
|-------|
| 97012 |

NIK Drug Test - Test C

Modified Dille-Koppanyi Reagent is used for the presumptive identification of Barbiturates. Used after a no change result in Test A and Test G, and an orange result in Test I.

| CODE |
|-------|
| 97013 |

NIK Drug Test - Test D

Modified Ehrlich's Reagent is used for the presumptive identification of LSD (Lysergic Acid Diethylamide). Used after positive results in Test A and B.

CODE

97014

NIK Drug Test - Test E

Duquenois-Levine Reagent - Standalone test for the presumptive identification of Marijuana, Hashish and "Hash Oil".

CODE

97015

NIK Drug Test - Test F

Acid Neutralizer should always be used upon completion of each test, to ensure that the strong acids and bases contained in many tests won't pose a danger to personnel.

Each pouch includes enough acid neutralizer to neutralize five individual NIK tests

CODE

97016

NIK Drug Test - Test G

Modified Scott Reagent is used for the presumptive identification of Cocaine, Crack or Free Base.

A positive result is generated by blue or pink with blue speckles after breaking the first ampoule, a pink result after breaking the second ampoule and a pink layer over a blue layer after breaking the third ampoule.

CODE

97017

NIK Drug Test - Test H

For the presumptive identification of Methadone.

A positive result is generated by the absence of color change after breaking the first ampoule and a resulting blue colour. Test H should only be used after positive results from Test A, G, I and C

CODE

97018

NIK Drug Test - Test I

Lieberman's Reagent is used for the general screening to presumptively identify PMA, Ketamine, Barbiturates and Methadone. This test is used after a Brown result in Test A, or a clear result in Test A followed by no change in Test G.

CODE

97019

NIK Drug Test - Test J

For the presumptive identification of PCP (Phencyclidine). Test J should be used after positive results from Tests A, G, I and W. A positive result is generated by the absence of color change in the first ampoule, followed by a blue or pink with blue speckled result after the second and third ampoules.

CODE

97020

NIK Drug Test - Test K

For the presumptive identification of Heroin, Black Tar, Codeine and Morphine.
Easier to distinguish between the four Opiates than using Test B. Test can be used to screen out Methapyrilene and Propoxyphene

CODE

97062

NIK Drug Test - Test L

Modified Mecke's Reagent is used for the presumptive identification of all forms of Heroin, including White, Brown and Black Tar, and MDMA (Ecstasy), as well as detecting the presence of certain dye combinations designed to give false positives with Test A.

CODE

97063

NIK Drug Test - Test M

For the presumptive identification of Methaqualone (Quaaludes, Sopor Somnifac, Opitamil and Parest are the trade names).

CODE

97064

NIK Drug Test - Test N

For the presumptive identification of Pentazocine, commonly known under the trade name Talwin® Nx or Talacen, as well as a presumptive test for Oxycodone.

CODE

97065

NIK Drug Test - Test O

For the presumptive identification of GHB (Gamma-Hydroxybutyrate). It is used after positive results from Tests A, G, I, W, J and R. A positive result is indicated by a green hue

CODE

97066

NIK Drug Test - Test P

For the presumptive identification of Propoxyphene, commonly known under the tradename Darvon®.

CODE

97067

NIK Drug Test - Test Q

For the presumptive identification of Ephedrine and Pseudoephedrine. A positive result is generated by the absence of color change after breaking the first ampoule and a purple or violet color after breaking the second ampoule.

CODE

97068

NIK Drug Test - Test R

For the presumptive identification of Valium (Diazepam), Rohypnol (Flunitrazepam) and Methcathinone. A positive result is generated by a lavender color after breaking all ampoules.

| CODE |
|-------|
| 97069 |

NIK Drug Test - Test T

Morris Reagent is used for the presumptive identification of Ketamine.

A positive result is generated by Lavender color. A negative result is indicated by a blue/green color, or by no color reaction

| CODE |
|-------|
| 97080 |

NIK Drug Test - Test U

For the presumptive identification of Methamphetamine and MDMA (Ecstasy).

Test A should always be used prior to Test U, as color results for Methamphetamine, Amphetamine and MDMA (Ecstasy) can be very similar.

| CODE |
|-------|
| 97070 |

NIK Drug Test - Test V

Mandelin Reagent is used for the presumptive identification of Amphetamines and Methadone, as well as screening for PMA and Ketamine in conjunction with Test I.

| CODE |
|-------|
| 97071 |

NIK Master-Pac Kit

Housed in a strong plastic box for safe storage, this kit contains two boxes containing ten tests of the following reagents namely, 95500 Test A, 97015 Test E and 97062 Test K. It also contains one box of ten tests for reagents 97013 Test C, 97014 Test D, 97017 Test G, 97018 Test H, 97020 Test J, 97063 Test L and 97070 Test U. It also includes one box of 97016 Acid Neutraliser, a self-help manual, field-testing CD.

| CODE |
|-------|
| 97011 |

NIK Cocaine ID Swabs

Packaged in individual foil envelopes, these small swabs are easily carried in a pocket. When wiped across a surface on which there is good reason to suspect the presence of Cocaine, these swabs change colour. Test results are immediate. These swabs are sensitive to trace amounts of residue, far less than could be collected for regular field-testing. Unlimited shelf life assures that these swabs will provide accurate, reliable results, when and where you need them.

| SIZE | CODE |
|---------|-------|
| 25 Pack | 97072 |
| 50 Pack | 97073 |

Hemident 'McPhails' Reagent

Hemident is a non-destructive, presumptive field test kit for the presumptive identification of blood. Each test is a compact, disposable tube containing two chemical reagent ampoules. The suspected stain is placed inside the tube and both ampoules are broken in succession. A blue/green reaction indicates blood. A reaction will occur at up to one part per million of blood.

Hemident will not distinguish between human and animal blood. To determine if blood is human specific, use a test such as Hexagon OBTI or submit the blood for a laboratory serology analysis.

| SIZE | CODE |

| 95356 |

BlueStar Forensic Kit

The BlueStar Forensic Mini Kit is meant primarily for police searching small areas or objects for a quick verification when suspecting a crime has happened.

The kit comprises of 2 x 125ml Atomizers containing distilled water and 2 x BlueStar Tablets.

Simply dissolve 1 pair of BlueStar tablets in one of the bottles and spray on any surface.

| CODE |
|-------|
| 95366 |

BlueStar Forensic Mini Kit

The BlueStar Forensic Kit provides the forensic investigator with a complete tool to ascertain the presence of blood, or its possible absence at a crime scene.

The kit comprises of a hermetically sealed bottle with 500ml and 3 catalyst tablets.

Simply add the three white tablets to the bottle to obtain a single-use mixture.

| CODE |
|-------|
| 95367 |

BlueStar Forensic Tablets

BlueStar is a new reagent whose purpose is to reveal blood stains that have been washed out, wiped off or which are invisible to the naked eye.

| SIZE | CODE |
|---------|-------|
| 4 Pack | 95370 |
| 8 Pack | 95371 |
| 24 Pack | 95372 |

Based upon chemiluminescence, its unique formula qualifies it as the most effective blood revealer available on the market, for crime scene as well as forensic lab use.

These tablets do not alter the DNA of the revealed blood which allows for its subsequent genotyping. It is also compatible with ABO typing.

BlueStar Forensic Training Tablets

This version of BlueStar Forensic Tablets is intended for training purposes ONLY.

| SIZE | CODE |
|---------|-------|
| 4 Pack | 95362 |
| 8 Pack | 95363 |
| 24 Pack | 95364 |

It reacts the same way as regular BlueStar Forensic Tablets do, except for DNA analysis since this 'TRAINING' version destroys DNA.

A great product for training crime scene technicians but is definitely

EVIDENCE COLLECTION

Correctly packaged evidence is essential if reliable scientific results are to be obtained. To assist this process CSI has developed a number of products in order that the crime scene examiner can safely submit items to the laboratory without fear of damage or contamination. Do not be confused with other inferior imitations, as our range of products are manufactured from quality materials and are backed up with quality assurance registrations to ISO Standards.

CJA Boxes

Good, strong, quality boxes all with CJA label printed on the lid. The smaller box measuring 127mm x 102mm x 30mm approximately is generally used for broken pieces of glass. The Medium box measures 225mm x 127mm x 40mm and the Large box measures 254mm x 223mm x 45mm.

| SIZE | CODE |
|--------|-------|
| Small | 97106 |
| Medium | 97105 |
| Large | 97104 |

Please note these boxes can also be supplied plain (no printing).

Please contact our offices for further details.

CJA Printed Paper Window Sack

Unlike plastic, paper allows items 'to breathe' and eliminates the possibility of oxidation and therefore paper sacks are ideal for the storage of physical evidence such as undergarments, shoes etc. This type of sack is glued at the bottom which gives it greater strength. One side of the sack has a clear window running down the centre of it, in order to allow viewing of the items inside, whilst the other is printed with an evidence label.

As with most of our products we appreciate that many departments do not require large quantities, so we have packed them in 50s and priced them accordingly. If however you require larger quantities ie 500pcs or 1000pcs, please contact our sales office as we will be able to offer discounts for larger purchases.

All sizes are approximate and subject to change.

Small 35cm x 55cm, Medium 51cm x 69cm, Large 48cm x 95cm.

| SIZE | CODE |
|--------|-------|
| SMALL | 95665 |
| MEDIUM | 95666 |
| LARGE | 95667 |

CJA Printed Paper Sack No Window

A large manufactured paper sack with glued bottom, but without the window. It still has the CJA label printed on one side but no window has been inserted during the manufacturing process. Again generally supplied in packs of 50 but larger quantities (and sizes) are available.

All sizes are approximate and subject to change.

One stock size 48cm x 95cm

| CODE |
|-------|
| 95668 |

Paper Window Sack No CJA Label – Large

A large manufactured paper sack with a glued bottom, a clear window, but no CJA label or printing. These bags are generally purchased by our overseas customers who want to attach their own chain of custody or continuation label.

Again generally supplied in packs of 50 but larger quantities (and sizes) are available.

All sizes are approximate and subject to change.

One stock size 48cm x 95cm

Tamper Evident Bags

As anyone knows preserving the chain of custody is extremely important because it maintains the integrity of the evidence. Whenever a person comes in contact with a piece of evidence, the contact must be documented to prove that the evidence was always accounted for and that at no time was it ever tampered with it. If the chain of custody is ever broken, the admissibility of the evidence becomes more difficult in court. These specially manufactured bags have many tamper-evident features, including a unique bag number and printed label.

Generally available in three sizes namely Small (190mm x 260mm), Medium (250mm x 420mm) and Large (390mm x 610mm) but other sizes are available. In addition they are usually supplied in packs of 100 but again larger quantities are available. Please contact our sales offices for further details.

Small - 190mm x 260mm, Medium - 250mm x 420mm, Large - 390mm x 610mm

Trace Evidence Collection Nozzle

A unique vacuum cleaner nozzle attachment for the collection and securing of evidence so small that it cannot be spotted with the naked eye i.e.hairs, fibres, pollen etc.

Having attached the nozzle to any standard vacuum cleaner with the loose stabilising rubber ring supplied, particles are collected and caught in the built in filter paper of the Petri dish. The filter dish (one supplied) is removed and the evidence particles secured with an optically clear plastic lid. The contents can now be examined.

For replacement filters see product code 95699

CODE
95698

Trace Evidence Collection Filters

For use with Trace Evidence Collection Nozzles (Product Code 95698). These filters are ideal for the collection and securing of evidence so small that it cannot be spotted with the naked eye i.e.hairs, fibres, pollen etc. Once used the filter dish is removed and the evidence particles secured with an optically clear plastic lid. The contents can now be examined.

CSI Hydrocarbon Detector MK1

The CSI Hydrocarbon Detector MK 1 is a ruggedly constructed gas detection and field survey tool. This unit will detect the presence of hydrocarbons that may be present at the fire scene and is equally effective as a general purpose gas detector. This product is supplied in a carrying case and comes complete with a battery charger and manual.

FEATURES:

Two Modes of Operation: High or Low Sensitivity.

Sensor: Solid state plug-in type, housed in a protective guard mounted at end of telescoping probe.

Meter readout: Provides visual indication of relative concentrations of hydrocarbons.

Displays: Audio and visual indication of the detection of accelerants and gases. A Yellow "Purge" indicator and Red "Sensor / Detection" Indicators.

Electronic Purge: Permits quick recovery of sensor element.

Mute Switch: Turns off audio tones and permits discreet investigation.

Telescoping Probe with Sensor Guard: Sensor guard mounted at end of telescoping probe which extends to 45" and retracts to 19" for easy storage.

Power: Two Nickel Cadmium rechargeable batteries, each battery providing 3 hours of operation. Second battery is accessed by switching from "A" to "B" with battery transfer switch.

CODE

97132

CSI Arson Investigator

The CSI Arson Investigator is a highly sensitive gas detector that combines an array of 16 Ultraviolet LEDs and 16 Bright White LEDs in a compact arson investigation tool. The array of 16 Ultraviolet LEDs provides an ultraviolet light source that may cause certain accelerants to glow and fluoresce. An outer ring of 16 Bright White LEDs is useful in poorly lit areas for safer investigation.

It will detect approximately 125 toxic/combustible gases and/or vapors - including all heating gases. It has an adjustable sensitivity switch for which the higher sensitivity function is used to locate trace amounts of hydrocarbons and the lower sensitivity function aids in pinpointing the source in high concentrations. It is powered by two 'D' cell batteries that will give 8 – 10 hours of use. Supplied in a carry case as shown.

97135

CSI GSR Kit

GSR testing has been available in different forms for about 30 years, but all tests to date had one common feature and that is the investigating officer 'swabs' the hands of the suspect to collect GSR particles and then sends the swabs to a laboratory for analysis by various methods.

The laboratory method commonly recognized as most reliable and practical is interpretation via Scanning Electron Microscope (SEM).

However, it can take weeks even months, to obtain results from a laboratory, so the benefit to an officer offered by GSR testing has been very limited. In fact, many officers don't even bother applying the technique, despite the fact that it is a reasonably reliable technology!

This GSR kit is different in as much as it is a "binary" test. This means that it allows the investigating officer to test the suspect two times for GSR residues, once directly at the scene, which provides an immediate investigative or "presumptive" benefit, and again in the laboratory, which provides the "evidentiary" data for use in court later on.

Full instructions are supplied in every kit.

CODE

97130

CSI 'RIFF' Kit

When the war broke out in Iraq, the CSI GSR Kit ISID-1 (product code 97130) was presented to the Pentagon. Military commanders immediately recognised the benefit of this technology. Soldiers were being attacked by hostile combatants dressed as civilians, hiding in cars and buildings etc. Once fired, they would then put down their weapons, mingle among civilians and soldiers with impunity, creating a very dangerous situation.

However the product in its present form was of no use to the Military. Soldiers needed a smaller product, so that they could carry several tests in their backpacks. They also needed a product that primarily yielded field results, not evidence for trial. Thus, a military version of this technology was developed and renamed RIFF (Rapid Identification, Friend or Foe) by the Pentagon. The Military can now quickly and accurately identify hostile combatants (shooters), and detain them.

The test also responds accurately to black powder (gunpowder), so it is helpful in identifying persons who have been building bombs or transporting explosives.

Formerly only available to US troops it is now available to our Military and other selected agencies around the world thru CSI.

CODE

97131

CSI Postal Bomb Screener

The CSI Postal Bomb Screener is ideal for screening bundles of letters, packets and parcels detecting virtually all known letter-bomb detonating devices.

FEATURES:

- Fast, safe and cost effective mail screener for the detection of postal bombs.
- Packages up to 2.25 inches (6 cm) thick can be checked.
- Excellent discrimination between potentially dangerous contents and paper clips, staples and metal tags.
- Will not damage film, magnetic tape or computer disks.
- Designed for use by secretaries, receptionists and mailroom staff without any requirement for special training.
- Reliable and easy to use with negligible false alarm rate.
- Developed in Europe, where thousands are in daily use.
- Operates on 110V/220V, 50/60Hz. Integral battery takes over in case of power failure.

CODE
95711

CSI Dropex Kit

The CSI Dropex Kit was developed to detect Group A explosives, Group B explosives, Nitrate based improvised explosives and Chlorate-based improvised explosives TATP - (Tri Acetone Tri Peroxide).

Simple to use these field kits work on the principles of wet chemistry which gives a colour reaction when the agent comes into contact with minute amounts of explosives. The colour reactions are specific to each group of explosives. No additional equipment is needed and it works in all conditions and environments. It gives extremely quick results. It is safe and meets international safety standards. It will detect minute traces of explosives (20 ngs) with No false negatives and a very low false positive rate.

It is extremely cost effective and has a multitude of uses such as used for sweeping and searching for explosives at sensitive installations, airports, roadblocks, checkpoints, VIP events, vehicles, suspect houses, etc.

CODE
97138

CSI Expray Explosive Kit

A unique, aerosol based field test kit for the Group A explosive (TNT, TNB etc) and Group B explosives (Semtex H, RDX etc) and compounds that may contain nitrates that are used in improvised explosives.

Expray is commonly used as a pre-blast analysis tool post blast investigative tool and as a technical evaluation test on hazardous material "clean up" sites. When used as an after explosion tool it helps speed up crucial investigations 'on the spot'. Sensitivity — less than 1 microgram. The testing process is fast and efficient. Results appear in seconds and no additional tool or equipment are required.

Each cannister detects a different type of explosive revealing a different colour for each explosive category.

Simply wipe the suspected area with the adhesive collection paper and spray Expray on the paper with each of the three cans until a colour reaction appears. Only an immediate reaction should be considered positive. The sprays are packed in a rigid carrying case complete with collection papers.

CSI Inking Pad – Economy

These economy rectangular shaped pads leave a crisp, clear imprint and dry almost instantly. Only a slight residue is left on the fingers which can be removed by rubbing them together or wiping them with a towel or cloth. Each pad will give approximately 5000 individual prints.

Approximate size 127mm x 75mm (5" x 3")

CODE

95814

CSI Inking Pad – Deluxe

These fingerprint pads leave a crisp, clear imprint and dry almost instantly. Only a slight residue is left on the fingers which can be removed by rubbing them together or wiping them with a towel or cloth. These pads will give you approximately 16,000 individual inked impressions which presents excellent value for money.

Size is approximately 127mm x 75mm (5" x 3")

CODE

97145

CSI Pocket Inker

These small round economy pads leave a crisp, clear imprint and dry almost instantly. Only a slight residue is left on the fingers which can be removed by rubbing them together or wiping them with a towel or cloth. These small pads will give you approximately 1000 individual inked impressions.

Size is approximately 50mm in diameter (2")

CODE

95813

Reeves Fingerprint Ink

Reeves fingerprint ink is still the only ink recommended for use in the United Kingdom by the British Home Office as it has been tried and tested over many years. Reeves fingerprint ink is not only waterproof, permanent, non toxic and quick drying but gives excellent definition of prints when used correctly.

Maximum benefits of this product can be obtained if used in conjunction with other CSI products such as our inking slabs 95830 and 95832 and our inking rollers 95820 thru 95826.

Pack Size: 3 x 10ml Tubes

CODE

95805

Perfect Print – Fingerprint Ink

Not recommended by the British Home Office but still a very effective ink which is why CSI have added it to their range. However not only does it have the same characteristics as the Reeves ink, but it has two other benefits as well. The first being that you get more ink for money as it is supplied in larger tubes and the second and more importantly is, that it can be easily washed off using just soap and water. This is an added bonus especially if you have ever been tasked with the job of cleaning up the inking slabs and rollers in your department.

Once again maximum benefits of this product can be obtained if used in conjunction with other CSI products such as our inking slabs 95830 and 95832 and our inking rollers 95820 thru 95826.

Pack Size: 1 x 2oz tube

CODE

95807

Fingerprint Roller

Available in various sizes, this inking roller features a strong plastic moulded handle with medium hard rubber roller. Mounted on a metal framework this allows the roller to run smoothly and spread ink evenly.

| SIZE | CODE |
|-------|-------|
| 50mm | 95820 |
| 75mm | 95821 |
| 100mm | 95822 |

Fingerprint Roller Deluxe

This inking roller features a strong plastic moulded handle as with other rollers in our range, but the roller itself has been specially formulated to lay on a perfect layer of ink onto your fingerprint block every time.

The roller is mounted on a metal framework allowing it to run smoothly and spread ink evenly.

Roller width approximately 100mm (4")

CODE

95823

Fingerprint Inking Block

This inking block/slab consists of a solid brass inking plate mounted on a piece of varnished wood with a rubberised non-slip base. The block measures approximately 10" x 3" x 1" (250mm x 75mm x 25mm) The plate can be easily cleaned once used, using products found in the Cleaning and Disinfection section of this catalogue.

CODE

95832

Palm Roller

A professional looking and well constructed item comprising of a 150mm (6") roller mounted on a Black Metal framework, secured to a rubberised non slip mahogany base.

Ideal for regular use in custody suites. Roller is replaceable.

CODE

95825

Portable Fingerprint Inking Kit

Complete kit that incorporates fingerprint ink, inking roller, towellettes, fingerprint block and a form holder in one specially designed box. Comes complete with carrying case.

CODE

96799

Pre Inked Strip

A quick and easy way of taking fingerprints. Each box contains sheets of high grade polyester film that has been coated with a thin layer of fingerprint ink. To use, peel apart the film strips to expose the ink. Roll the fingers as normal and a thin layer of ink has now been transferred to the fingers. Transfer onto standard card or fingerprint forms. With this system it is difficult to apply too much or too little ink and is ideal for elimination purposes, corporate identification purposes or visa applications etc.

Inkless Fingerprint Kit

The easiest, cleanest and quickest way to obtain elimination fingerprints in the field. Specially designed forms come in a durable vinyl case which is maintenance free and instantly ready to use.

Pack contains 50 sheets.

CODE

95815

Inkless Shoeprint Kit

A clean and easy method for obtaining positive footwear impressions for comparison purposes with marks and castings obtained at a crime scene. Each kit contains a chemically treated pad measuring approximately 33cm x 13cm upon which the shoe is placed. Once the shoe has been inked it is then transferred to a piece of pressure sensitive treated paper included in the kit, after which an image is left on the paper for examination. Details on the reverse allow for the officer to record important information such as name, dob, date taken, crime reference number, offence etc.

Please note that the inking pad should always be stored correctly when not in use otherwise it may dry out and render the kit useless.

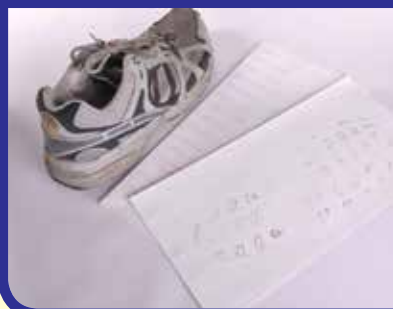

For refill paper pads see product 95819

CODE
95818

Inkless Shoeprint Kit – Paper Refill

Refill papers for 95818 Inkless Shoeprint kit. Each refill contains approximately 100 pressure sensitive treated papers. Details on the reverse allow for the officer to record important information such as name, D.O.B, date taken, crime reference number, offence etc.

For kits containing the chemically treated pad see product 95818

CODE
95819

Fingerprint Form Holder

This is a polished stainless steel holder with a laser cut insert. However the insert is cut specifically for use with English/European A4 formats and is therefore unsuitable for those countries using the North American A4 format.

Widely used by many Police Departments within Europe.

CODE
95834

CSI Pocket UV Lamp

A low cost, hand held lamp with a 4 watt tube. Powered by four AA size batteries the CSI Pocket UV Lamp is useful for examining security markings made by thief-trap powders and sprays.

CODE
96922

CSI Midi Fingerprint Lamp

This handy compact pocket spot light with high tech optics that ensure that light is concentrated and directed without straying. This means that the image is therefore made more brilliant and light performance visibly better. Superb little light source for close up seek and search work. Measures only 5cmx10cmx2cm Weight: 150gms Uses 4 x AA batteries (supplied).

CODE
96090

CSI Optimax Forensic Lite System

The new CSI Optimax Forensic Lite System features a rugged aluminum body, eight interchangeable LED lamp heads each with an internal dome lens. The lamp provides illumination in UV-A, Violet, Blue, Cyan, Green, Amber, Red and White light. It's ideal for crime-scene investigation, gathering potential evidence and forensic laboratory work.

CODE
95818

Also included in the kit are three snap-on contrast filters (yellow, orange and red) which allow for multiple users of lamp without the need for spectacles, a Smart AC Charger, Smart 12V DC charge all instruction leaflet all housed in a rigid plastic carrying case.

Maglite Flashlight

These lamps units are constructed of precision machined high strength aircraft aluminium alloy cases. They sport a high intensity light beam with linear focusing spot to flood beam with a twist of the wrist. A spare Krypton bulb is safely secured in the tail cap. High grade rubber 'O' rings ensure that a Mag-Lite is water and shock resistant. With plated contacts and the finest metals to enhance conductivity, reduce oxidation, these lamps have maximum corrosion resistance and durability and therefore suitable for Police, Security and professional emergency services around the world. Prefix number refers to number of batteries required. Batteries are not included in the price but can be supplied if required. Please contact sales office for pricing.

Comparator Bulb

Replacement bulbs for the CSI Forensic Comparator (product Code 96820).

CODE
96821

Each screen uses two bulbs so if one bulb blows we would recommend that you change both of them, although this is not essential. Bulbs sold singularly.

CSI Economy UV Lamp

The CSI Economy UV Lamp is portable, rechargeable lamp fitted with two 6w UV bulbs providing 180 degrees light distribution. Its features include an overcharge protection circuit for extending battery life by upto 3 times, LED charging indicator and portable handle design.

CODE
96086

CSI 'Blue-Lite' LED Inspection Kit

The CSI 'Blue-Lite' LED Inspection Kit is a powerful, portable, Blue Light source. The internal dome lens provides uniform light for enhanced forensic photography. It has a cordless, corrosion-resistant black-anodized aluminum lamp body and gives up to 100,000-hour LED service life. Instant-on operation allows lamp to reach full intensity immediately. The electronic intensity stabilizer assures consistent performance and the LED maintains high intensity between charges. Red/green battery strength indicator signals when a fresh charge is required.

Its powered by rechargeable NiMH battery which provides 90 minutes of continuous inspection between charges. Smart AC and DC chargers included and comes complete with orange-contrasting spectacles, belt holster all housed in a padded carrying case.

CODE

97441

Panther LED Lite

The Panther LED Lite seek and search lamp is an upgrade on an already well proven lamp. It uses the latest in LED technology and thermal power management, providing intense light power and durability. It gives vastly improved operating times, no heat risk and requires no replacement bulbs. (Working life approximately 50,000h+). It also gives a much clearer white light, flooding the immediate area and providing a strong spot beam for long distance lighting. Weighing in at only 1.6Kg this lamp offers the ultimate power to weight ratio and an incredible running time of 8h at full power.

Supplied with mains charger and shoulder strap.

CODE

95006

Solaris Floodlight System

The Solaris Floodlight System uses the latest in LED technology and thermal power management, providing intense light power in a compact portable unit. The base has been upgraded to make it more user friendly with an ergonomic shape that houses the charger, telescopic pole and a wider shoulder strap, for greater portability and reduced stress when carried long distances.

This unit can be set up in less than 30 seconds for rapid deployment in emergency situations, and is made from a very tough ABS plastic to ensure long operating life and reliability for all situations. The most important aspect of LED floodlighting is the light output and in this regard the Solaris head now has 3500 lumens as standard. The combination of 18 high powered Cree® LEDs and intelligent optics offer a unique floodlight that completely eliminates glare and covers huge areas with shadow free white light.

This lamp produces no heat, operates silently and weighs less than 5.7kg!

Supplied with a mains charger, extension pole, diffused filter and shoulder strap

CSI Flexi Tape

Uniform quality lifting tapes are necessary for the ultimate preservation of latent fingerprints. Consistency in adhesives and pressure winding ensure the absence of bubbles and streaks.

CODE
96104

CSI have a number of tapes to suit individual tastes and our CSI Flexi tape is no exception. Suitable for uneven surfaces where regular tape is a problem. It will conform and stretch and allow fingerprints to be lifted from doorknobs, wooden surfaces, light bulbs etc. Each roll 40mm wide x 30cm long (approx).

CSI Gel Lifters

Gel (Gelatine) or Rubber lifters as they are sometime referred to, have been developed for the lifting of fingerprints, footprints, dust marks and micro traces from crime scenes. The non-aggressive, low-adhesive gelatine layer permits the lifting of trace elements from almost every surface including porous materials such as paper or cardboard. Lifted marks can then be photographed or examined with oblique lighting. These lifters can be cut with scissors to fit a particular job before removing the cover sheet. Technical Notes on Uses and Guidelines available on request.

CSI Classification Magnifier

Fingerprint classification involves hours of peering through optics and a fingerprint examiner quickly learns the worth of good quality optical systems and the cost of a poor one. CSI have therefore selected this product as it gives little or no distortion but optimum magnification and performance. This is a professional crafted magnifier providing optimum performance for distortion free images. The base, shaft and lens housing are made from quality metal with an adjustable thumb screw so that the lens can move freely up and down the shaft to achieve perfect focus for the examiner. Recommended for a central and overall sharpness, brightness and contrast. Magnification value of 4.5x and an overall viewing field of 55mm.

Cadaver Tissue Builder

Shrunk and shriveled fingertips of cadavers can often be restored to normal size by the injection of CSI tissue builder into the tip of the finger with a hypodermic syringe.

CODE

96368

Chrome Plated Finger Straighteners

For use on their own or in conjunction with product code 96373, the Post Mortem Fingerprinting Kit, these are for straightening the fingers when Rigor mortis has set in. Supplied as a kit containing small, medium and large chrome plated straighteners, they are ideal for bending back the fingers thereby enabling fingerprinting to be taken for identification purposes.

CODE

96370

CSI Precision Knife Kit

Multi-purpose precision knife set ideal for cutting, chiseling, stenciling and scoring. Invaluable at crime scenes for obtaining evidence such as paint scrapings for analysis by the laboratory.

CODE

97092

The set contains three types of handle and a wide range of interchangeable steel blades. All of the handles have a positive guide locator to provide extra safety when changing blades. The spare blades are held in place in the lid of the storage case by a magnetic retaining strip.

Replacement blades available on request. Please contact our sales offices for pricing and availability.

Plain Edge Stainless Steel Tweezers

For the safe handling of contaminated evidence or the handling of documents that are being chemically treated. These can be re-used once cleaned with alcohol or autoclaved. Please note: Tweezers may vary from image shown

CODE

96320

Disposable Clamp Forceps

For the safe handling of contaminated evidence or the handling of documents that are being chemically treated. These are predominantly for single use whereby they are then discarded to avoid any contamination. The unique scissor action allows them to be locked into place thereby keeping a firm grip on the object being held. Supplied in packs of 10pcs

| |
|-------|
| CODE |
| 96326 |

Disposable Scissors - Sterile

Fine pointed scissor with both ends sharp. These are small, all metal disposable scissors. Each pair is individually packaged for sterility. Supplied in small packs containing 5 pairs

| |

Ligature Knife

In an emergency, time is important to ensure the speedy and effective release of the casualty from the scene of an accident. The curved, snub nosed body is extremely light and has an internal surgical stainless steel blade which is not accessible to flesh, thus not increasing discomfort. Specification and benefits include: Blade is inaccessible to flesh at all times. 'Nose' does not bend and expose blade even with heavy duty use. Textured surface for firm grip even when wet. Impact resistant nylon casing for durability. The aperture is less than 5mm which is the British Standard finger width Lanyard attachment point. Specially honed blade for rescue.

Minor Disposable Scalpel

Short plastic handle fitted with a 10A sized blade.
Also supplied with a plastic guard for covering the blade.

Each pack contains 10 pieces.

CODE

96312

Plain Sterile Transport Swabs

Plain sterile dry swabs for specimen collection.

Each 6 inch sterile swab on a plastic shaft comes labelled for inclusion of details such as Date/Site and Time References. The swab comes in its own polypropylene tube for transport back to the laboratory. Normally sold in Pk Of 10 but larger quantities can be supplied if required. Please contact our sales office for further information and prices.

Please Note: These are NOT DNA free and should not be used at live crime scenes as there may be a possibility of contamination. Use product 96337 shown in this section.

CODE

96336

'DNA Free' Sterile Transport Swabs

These swabs are certified 'DNA Free' and are for use at crime scenes. It has been found that medical transport swabs (such as our 96336 swabs) being sold by competitors for 'live' crime scene work may be contaminated as the process they undergo does not entirely kill DNA and therefore may well cause problems later if taken to court.

Normally sold in packs of 10 but larger quantities are available.
Please contact our sales office for pricing.

ABFO Scale

Excellent for scientific photography the ABFO No.2 L shaped scale measures 105x105mm giving millimetre markings accurate to 0.1mm. Printed on 1mm thick laminated plastic with a matt finish these are perfect for photographing in most lighting conditions. Each scale incorporates circle markings to compensate for distortion resulting from oblique camera angles. Alternating black and white 1mm bars permit measurements to be taken even from over and under exposed photographs. Grey areas have also been included that give a reflectance value of 18%

| CODE |

| 96403 |

Continuous Photo Evidence Scale

This continuous photo evidence scale measures millimeters on one edge and inches on the other. Each 2.5cm (1") by 9.1m (30') roll features a repeating pattern every 30.5cm (12"). The adhesive is non-permanent so that you can apply the scale and remove it without damaging the item. Alternating black bands throughout the scale provide better visualization in distance photography.

Disposable Photo Markers

This product was developed to be an adaptable, flexible, cost-effective way to mark evidence. In addition they can be bundled with all the evidence collected from the crime scene without incurring the costs associated with the larger plastic evidence markers.

They are perfect for use at bloody crime scenes as they can be discarded after use and no clean up necessary. Also ideal for mass casualty scenes or scenes with hundreds of pieces of evidence. They can then be incinerated to control the spread of disease that may be present.

They are made of heavy-duty white corrugated cardboard that come flat for easy storage. You simply fold and lock into place for quick, easy use. They have a unique locking mechanism which prevents them from unfolding.

Each surface is 102mm x 152mm 4" x 6" (approx) with space at the bottom for notes and each marker has a hole at the top for use with crime scene marker flags.

CSI Evidence Markers

The first person who arrives at a crime scene can be very important. By using our 'First Response Evidence Markers' at the scene they can now clearly mark all potential evidence as it is found.

The markers come in two colours, fluorescent yellow and fluorescent orange. This can aid in marking different categories of evidence.

The compact size allows them to fit easily in a pocket or crime scene kit ready for use. Made of thick rubber-like vinyl that is durable and easy to clean and decontaminate.

With the markers in view they provide an excellent overview of all evidence prior to numbering. The markers will not blow away in windy conditions and can be used as weights for the CSI Disposable Photo Markers.

CSI Evidence Markers are supplied in packs of 10. 5 x fluorescent Orange and 5 x fluorescent Yellow.

POWDERS

Many types of powders are available for the development of latent fingerprints. With fresh fingerprints the aqueous component of the fingerprint contributes significantly to the adhesion of the powders. With older fingerprints, when most of the water has evaporated, powders adhere principally to the fatty deposits of the sebaceous sweat content. The effectiveness of powdering is variable depending on the chemical and physical nature of the powder, the type of applicator and the care and expertise of the operator.

CSI have developed a number of powders and applicators to cope with any situation that an investigator may find himself in. These powders include Magneta Flake™ Light and Dark and the new 'Magneta Nano' powders currently being manufactured along with spring loaded magnetic brushes allowing for both horizontal and vertical surfaces to be examined. (See product codes 95150, 95151 and 95152).

Aluminium Powder

| PACK SIZE | CODE |
|------------------------|-------|
| Aluminium Powder 30gm | 96500 |
| Aluminium Powder 100gm | 96501 |
| Aluminium Powder 250gm | 96502 |
| Aluminium Powder 500gm | 96503 |

Extensively used by British Police Forces since the 1970's, Aluminium is a low cost dusting powder that is used for general dusting situations i.e. on glass, metallic surfaces, highly varnished wooden surfaces, enameled articles etc. It is not suitable for wet, very rough or dirty surfaces.

The wearing of an appropriate dust respirator is recommended and especially during lengthy examinations or in confined and poorly ventilated areas.

Black Powder

| PACK SIZE | CODE |
|--------------------|-------|
| Black Powder 30gm | 96505 |
| Black Powder 100gm | 96506 |
| Black Powder 250gm | 96507 |
| Black Powder 500gm | 96508 |

A powder suitable for general use and noted for its black hue.

To obtain the best possible results the brush must be fully charged with powder prior to dusting as insufficient powder on the brush may be unsuitable. Extreme care should be taken when using this colour to avoid spillage and dust clouds which may prove difficult to remove from a person's property. Stories are abundant from CSI's who have inadvertently spilt black powder on light coloured carpets to find to their horror that this powder is impossible to clean up completely.

Gold Powder

| PACK SIZE | CODE |
|-------------------|-------|
| Gold Powder 30gm | 96514 |
| Gold Powder 100gm | 96515 |
| Gold Powder 250gm | 96516 |
| Gold Powder 500gm | 96517 |
| Gold Powder 1kg | 96518 |

A very fine golden coloured powder suitable for leatherwear, plastic bags, aluminium surfaces etc

Instant White Powder

| PACK SIZE | CODE |
|----------------------------|-------|
| Instant White Powder 30gm | 96520 |
| Instant White Powder 100gm | 96521 |
| Instant White Powder 250gm | 96522 |
| Instant White Powder 500gm | 96523 |
| Instant White Powder 1kg | 96524 |

Well recognised powder that has been in use for many years. Suitable for relatively clean smooth surfaces where a light contrast is required.

Bi-Chromatic Powder

| PACK SIZE | CODE |
|---------------------------|-------|
| Bi-Chromatic Powder 30gm | 96555 |
| Bi-Chromatic Powder 100gm | 96556 |
| Bi-Chromatic Powder 250gm | 96557 |

A mixture or multi coloured powder which appears black when dusted on a light coloured surface and silver when used on a dark coloured surface. Ideally suited for drinks/soda cans.

Magnetic Black Powder

| PACK SIZE | CODE |
|-----------------------------|-------|
| Magnetic Black Powder 50gm | 96525 |
| Magnetic Black Powder 250gm | 96526 |
| Magnetic Black Powder 500gm | 96527 |
| Magnetic Black Powder 1kg | 96528 |

Magnetic Black Powder is a granular powder containing pigment, metals and metal oxides. This type of powder can be used on numerous surfaces including glossy paper, polished wood, leather, plastic, glass and rubber. The powder may be used on plastic surfaces that have been treated previously with superglue fuming. The different colours that are supplied are to be used relative to contrast required.

Magnetic Jet Black Powder

| PACK SIZE | CODE |
|---------------------------------|-------|
| Magnetic Jet Black Powder 50gm | 96530 |
| Magnetic Jet Black Powder 250gm | 96531 |
| Magnetic Jet Black Powder 500gm | 96532 |
| Magnetic Jet Black Powder 1kg | 96533 |

Magnetic Jet Black Powder is of the same formulation as Magnetic Black Powder shown earlier in this section, except it has a little more of the darker pigment added during the manufacturing procedure which gives it a more intense dark black colouring when viewed.

Magnetic Silver Powder

| PACK SIZE | CODE |
|------------------------------|-------|
| Magnetic Silver Powder 50gm | 96545 |
| Magnetic Silver Powder 250gm | 96546 |
| Magnetic Silver Powder 500gm | 96547 |
| Magnetic Silver Powder 1kg | 96548 |

Magnetic Silver is manufactured in much the same way as Magnetic Black Powder except the pigments, metals and metal oxides used in its formulation are of course lighter. With Magnetic Silver the metal oxides used are finer giving it its silver-like colouring. This powder is generally more effective on rough, grained or porous surfaces whereby a good colour contrast is required.

Magneta Flake Powder

Magneta Flake is the result of an extensive research program carried out into fingerprint powders and is the first powder to be developed specifically for use with fingerprints.

Magneta Flake consists of an iron powder milled and flaked to optimum particle size and then ingeniously coated with amino acids to a specific weight. The production of this powder is highly complex but the result is a powder that has proved to be highly effective on all surfaces including plastic surfaces, plastic bags, metallic, wood and even brickwork. It can be used on paper and glass and has been found not to prohibit subsequent ninhydrin or other chemical treatments. It has now become the powder of choice for many crime scene departments as it has been proven to increase the number of marks and identifications found at a crime scene. If you're serious about crime scene investigation, then this is one powder you cannot do without. Available in two colours for contrast.

Please Note: Crime Scene Investigation Equipment Ltd are the exclusive manufacturers of this unique fingerprint powder. Do not be fooled into purchasing so called cheaper 'equivalents' currently on offer in the marketplace as this may result in great disappointment but more importantly, loss of vital evidence.

| COLOUR | CODE |
|--------|-------|
| Light | 96567 |
| Dark | 96569 |

Special Blower Powder 100ml

Specifically designed for use with the CSI Blower Brush (95130).

| COLOUR | CODE |
|--------|-------|
| Black | 96565 |
| Silver | 98566 |

Fluorescent Powder

| PACK SIZE | CODE |
|----------------------------------|-------|
| Fluorescent Powder – Yellow 25gm | 96573 |
| Fluorescent Powder – Pink 25gm | 96574 |
| Fluorescent Powder – Red 25gm | 96575 |
| Fluorescent Powder – Green 25gm | 96576 |

Fluorescent fingerprint powders are used in conjunction with an alternative light source (i.e. lasers and low powered ultraviolet lamps). It allows the visualisation of latent prints which otherwise may go undetected when using conventional processes. Suitable for either rough or contaminated surfaces or multi coloured surfaces where it may not be possible to choose a conventional powder which separates the latent print from its background. Easily applied with either a soft animal or feather brush this powder fluoresces at slightly different wavelengths to provide a choice when dealing with problematic backgrounds.

Magnetic Fluorescent Powder

| PACK SIZE | CODE |
|--|-------|
| Magnetic Fluorescent Powder – Green 50gm | 96578 |
| Magnetic Fluorescent Powder – Red 50gm | 96579 |

Similar to granular fluorescent powders these magnetic fluorescing powders are applied with a magnetic applicator (see product code 95150, 95151 and 95152) and the choice between Green and Red is dependent on the surface to be examined. This powder is particularly effective with Ultraviolet wavelengths. For use on plastic bags, glass and other smooth surfaces. It may also be used after articles have received superglue treatment.

Anti-Cut Gloves

Seamless Kevlar glove provides protection against cuts, slashes and abrasions. The natural latex palm coating gives excellent grip in both wet and dry conditions. Especially good for when picking up glass fragments etc.

CSI Coverall

The need for good quality protective clothing not only for a safe working environment but also to avoid any risks associated with cross contamination is fully recognised by CSI. Our coveralls are manufactured from an innovative fabric, which has been designed to allow superior breathability and are especially suited for protection against chemical splashes and spills or dry particulate contamination.

Evidence Handling Gloves

Lightweight cotton gloves ideal for eliminating the problem of leaving your own fingerprints on evidence. Particularly useful for document examiners and for use in the photographic laboratory. One universal size fits all.

CODE
96655

Face Mask – Nuisance

CSI have selected a range of masks that are most suitable for Crime Scene Examiners when dealing with the everyday procedures such as dusting for latent prints in a confined space. Our range of masks cover all types of hazards that may be encountered by the Crime Scene Investigator. This mask is for nuisance dust of a non-toxic nature only. As they contain no filter this standard should not be considered for respiratory protection. Box of 50 masks.

CODE
96665

Face Mask - FFP1

This range of mask is suitable for Crime Scene Examiner when dealing with the everyday procedures such as dusting for latent prints in a confined space. Ideally suited for powders such as Aluminium. They are supplied flat packed and individually wrapped. Sold singularly.

CODE
96666

Face Mask - FFP2

This range of mask is suitable for Crime Scene Examiner when dealing with the everyday procedures such as dusting for latent prints in a confined space but also gives added protection against toxic particles, mists and/or fumes. They are supplied flat packed and individually wrapped. Sold singularly.

CODE
96667

Protective Face Shield

Protects the entire face from splashed or sprayed chemicals. Also UV Absorbing. Made of heavy duty plastic, hinged flip up face shield for convenience

CODE
96687

Safety Glasses

Totally polycarbonate over specs with built-in side shields, brow guard and no metallic parts. Low energy impact protection at extreme environmental temperatures with UV protection. Can be worn over most glasses.

CODE
96688

Safety Goggles

Anti-Dust and Chemical-Splash impact resistant goggles. Designed primarily to protect the wearer against moderate unspecified mechanical impact hazards and liquid splashes. Manufactured with ventilation portals. Can be worn over most glasses.

CSI Pathfinder ESL

The technique of Electro Static Dust Print Lifting (ESL) at crime scenes dates back to the early 1970's. It is the ability to retrieve dust shoe marks from floors, carpets, upholstery where photography and conventional adhesive lifting film would be ineffective. The benefits of footwear lifting at crime scenes is fast becoming identified as the way forward especially as many criminals today are 'forensic aware' and take precautions not to leave fingerprints or DNA at the scene.

However they must leave footprints which is where the CSI Pathfinder has proved most invaluable. The problem with ESL machines currently on the market is that they are bulky, costly, lack power when needed and often do not work because the connecting probes or leads have been damaged by the previous user. They can also be very dangerous to the operator because of the high voltage that is put out. The Pathfinder eliminates all these problems as it is small, lightweight, runs from a single PP3 battery available anywhere and does not use probes or leads. It also has built in safety features inasmuch that should the operator accidentally receive a shock it will not do any damage to him/her even if they have a heart pace maker. This makes this unit the safest ESL machine on the market today. Evaluated and now widely used by Police departments throughout the world, this small device is the best that money can buy. If your department is interested in the benefits of footwear identification then take a look at our footwear systems namely 'IFIIS' and 'PathfinderXpress'. Our unique patented software has revolutionised footwear as we know it.

CODE

CSI Pathfinder Pouch

Carrying case for the Pathfinder. Will hold both pathfinder and metal earthing (grounding) plate. Also fitted with adjustable belt clip. Can be used for any model Pathfinder you have. (Great carrying case for your kids Nintendo DS too!)

CODE
96816

CSI Earth Bonding Lead Kit

This product is for use with the CSI Pathfinder Omega ESL Machine. Some surfaces can be difficult to lift from and contrary to popular belief whereby it is thought that you need more power to make a lift, what is actually required is better earthing or grounding. This kit comprises of a 3 metre grounding lead which attaches to the side of the Pathfinder and an earth bonding adaptor that plugs into the wall socket. This then allows the operator to use the earth or grounding of the building you are in. Pre 2004 models will also receive an additional earthing plate with this kit. At present this product is only available in Europe.

Electrostatic Lifting Film - Roll

Top quality lifting film made exclusively for CSI. Our film will of course work with any ESL machine but specifically formulated for use with Pathfinder Omega ESL machines. Each roll is 25cm wide x 20M long (10" x 65') and is supplied wrapped in anti-static tubing and protective cardboard tube for additional protection and storage.

CODE

96818

Electrostatic Lifting Film - Sheets

Top quality lifting film made exclusively for CSI. Our film will of course work with any ESL machine but specifically formulated for use with Pathfinder Omega ESL machines. Each sheet is approximately 25cm x 30cm (10" x 12") and is supplied either flat packed or rolled up in anti-static tubing and placed in a protective cardboard tube for easy storage.

CODE

96819

CSI Anti-Static Tubing

Suitable packaging for Electro-Static Lifts made at crime scenes in order to provide excellent static discharge protection. Made from specially manufactured polyethylene film, its ideal for making your own custom size anti-static bags. This product is supplied in a pack containing five pieces each 200mm wide x 5M long.

CODE

97190

CSI Electrostatic Footprint Kit

The CSI Electrostatic Footprint Kit comprises of a CSI Pathfinder Omega Electrostatic Dustprint Lifter (ESL), a roll of metalised film, ESL Roller, Protective Gloves, an Earth Bonding Kit and instruction leaflet all housed in a carrying case.

PathfinderXpress Software

PathfinderXpress is a recently developed piece of software, designed primarily for smaller Police departments with a limited budget, to manage their footwear more effectively.

Its the total footwear evidence solution linking the crime scene, the custody suite, the intelligence unit and the investigators.

It offers the following advantages:

- The opportunity to make economical use of footwear evidence within a restricted financial environment
- The inspection of the quality and quantity of both scenes of crime and suspect footwear marks
- Case screening can be checked online by supervisors, offering accurate, timely forensic intelligence and the screening in of potentially useful cases for expert evidential examination
- Footwear comparison techniques are based on the side by side, measurement and overlay systems used by Forensic Footwear Examiners
- Offering audited processes covering every action by each member of staff. Includes the capacity to draft reports quickly as required in MS Word format. Performance tools are built in, saving time in collating figures
- Students using the Express version can create viable projects using real software used by Police Forces
- Online collection of the NPIA (National Police Improvement Agency) NFRC (National Footwear Reference Collection) database of thousands of manufacturers shoes. Eliminates manual copying of NFRC codes to the system
- Casework can be filtered from local searches up to cross border searches over selected time periods, making footwear evidence manageable and productive
- It requires very little training time to enable users to produce productive results

96800

CSI Fingerprint Kit - MK2

The CSI Fingerprint Kit – MK2 is a more comprehensive kit than the MK1 and contains the following items: Aluminium Powder, Black Powder, White Powder, Jet Black Magnetic Powder, Magnetic Brush, Zephyr Fingerprint Brush, Pony Hair Brush x2, Fingerprint Template, Clear Acetate Sheeting, Lifting Tape, CSI Gel Lifters, Fingerprint Inking Pad, Handle Magnifier, Permanent Pen, Scissors, Fingerprint Lamp.

As CSI are the manufacturer, we have the ability to custom make forensic kits with the exact components that you require. Items can be added, subtracted or exchanged according to customer's requirements. As we are constantly looking to improve our products, case and contents are subject to change.

CODE
96801

CSI Educational Fingerprint Kit

Originally designed for young persons who wished to practice their 'CSI' skills at home, but more recently acquired by schools and colleges who wish to train their students in powdering and lifting techniques.

The kit comprises of White Powder, Fluorescent Red, Green and Yellow Powders, Red and Green Magnetic Fluorescent Powders, Black and Silver Magnetic Powders. Included are fingerprint brushes and magnetic wands, Black, White and Clear Hinged Lifters, Protective Gloves, disposable apron, a face mask and a user manual all in a carrying case with foam insert.

Fingerprint powders in other colours are available for purchase as are all the individual items in this kit. Please contact our sales office for further details.

CODE
97430

CSI Multi-Spectral Forensic Scanner

The CSI Multi-Spectral Forensic Scanner provides a compact and cost effective means of digitally enhancing damaged, faded and altered documents.

Ideal for forensic examination as well as historical and contemporary documents in libraries and archives, the scanner provides enhanced, rapid and easy-to-use method of visualizing hidden detail.

For full product specification and/or demonstration please contact our sales office for further details.

CODE
97225

CSI Burglary Kit

This kit has been especially developed by CSI for use at a burglary and contains the following items:

Aluminium, Black, White, Jet Black Magnetic, Magneta Flake Light and Magneta Flake Dark powders. Fingerprint Brushes, Zephyr Brushes, Magnetic Brush, Fingerprint and Footprint Acetate Sheetting, Fingerprint and Footprint Lifting Tape, Fingerprint and Footprint Gel Lifters, Fingerprint Template, Assorted Adhesive Labels, Arrows and Rulers. Scalpel Handle and Blades, ABFO and FBI Scales, Fingerprint Lamp, Face Mask, Protective Gloves, Disposable Tweezers, Tape Measure, Inking Pad, Fingerprint Cards, Permanent Pen, CQ Mirror, Handle Magnifier, Scissors, Mikrosil Casting Compound, Hemident Blood Detection.

Please note, as with all our kits they can be adapted/amended as per customer requirements. Please contact our offices for further details.

CODE

96805

CSI General Purpose Crime Scene

This kit is specifically designed to cover a number of situations the CSI may find him or herself in. To avoid the powders contaminating the rest of the case this kit is supplied in 2 parts (Part 1) a small case containing powders and brushes (Part 2) a larger case containing other essential items. The full contents of both cases are as follows:

Aluminium, Black, White, Gold, Bi-Chromatic, Fluorescent Red and Green powders. Jet Black, Magneta Flake Light, and Magneta Flake Dark powders. Fingerprint Brushes, Zephyr Brushes, Magnetic Brush, Fingerprint and Footprint Acetate Sheetting, Fingerprint and Footprint Lifting Tape, Fingerprint and Footprint Gel Lifters, Fingerprint Template, Assorted Adhesive Labels, Arrows and Rulers. Precision Knife kit, ABFO and FBI Scales, Fingerprint Lamp, Face Mask, Protective Gloves, Disposable Tweezers, Tape Measure, Inking Pad, Fingerprint Cards, Permanent Pen, CQ Mirror, Handle Magnifier, Scissors and a small quantity of evidence bags. CSI Protective Suit, Protective Goggles, Cleaning Wipes, Evidence Collection Materials, Casting Plaster, Impression Compounds, Spatula, Mixing Bowl.

Please note, as with all our kits they can be adapted/amended as per customer requirements. Please contact our offices for further details.

TERMS & CONDITIONS

DEFINITION AND CONSTRUCTION

" The Seller " shall mean Crime Scene Investigation Equipment Ltd, Locard House, Deethe Farm Estate, Cranfield Road, Woburn Sands, MK17 8UR, United Kingdom.

The conditions shall be deemed to be incorporated in any contract between a Buyer and the Seller and shall be construed in accordance with the provisions of English Law prevailing on or after any order has been accepted by the Seller.

Section 1: APPLICABLE TO ALL ORDERS

Acceptance: All orders received shall be understood to be placed in accordance with these Terms and Conditions of Business.

Prices: All quoted and printed prices are 'ex works' unless expressly specified to the contrary and are subject to alteration without notice. The Seller reserves the right to invoice goods at prices prevailing at the date of despatch plus value added tax (if appropriate) at the appropriate rate. If such alterations are necessary the Buyer will be informed prior to despatch of an order.

Quotations: All quotations are subject to confirmation. The right is reserved to correct any errors or omissions and to requote at prices prevailing at the date of despatch.

Delivery: Whilst every effort is made to adhere to delivery dates, no liability can be accepted for lateness or non delivery howsoever arising. The Seller reserves the right to charge for delivery unless otherwise agreed. Claims for damage in transit or non-delivery shall be subject to:

(a) Damage in respect of loss from a package must be signed for as damaged and both the carriers and ourselves advised in writing within three days.

(b) Non Delivery - In the case of non delivery, written notification must be made to the Company within fourteen days of despatch.

Title: The title in goods sold to the Buyer shall not pass to the Buyer until all sums due to the Seller from the Buyer (whether in respect to goods or otherwise) have been paid to the Seller. The buyer shall have the right before title of the goods has passed to resell the goods or any part thereof but shall pay to the Seller the proceeds of sale or such part thereof as may be necessary to pay all sums due to the Seller from the Buyer and until such payment shall hold proceeds of sale on trust for the Seller.

Dangerous Chemicals and Poisons: Chemicals should be handled and used only by trained personnel or under appropriate supervision. No responsibility or liability whatsoever is accepted for any loss arising out of the storage, use or handling of chemicals howsoever caused.

Computer Software: Software is subject to further terms and conditions. Further information available on request.

Section 2: HOME ORDERS

Terms of payment: Prices are strictly net for payment 30 days from date of invoice for account customers. We also accept all major Credit Cards. The right is always reserved (a) to request a remittance with an order (b) where new accounts are involved, either to request two trade and Banker's references or to issue Pro-Forma invoices and (c) in extreme cases, to charge interest on any balance outstanding and due to the Seller.

Carriage: Unless otherwise agreed the Seller reserves the right to charge for carriage irrespective of the mode of delivery.

Section 3: EXPORT ORDERS

Orders: Export orders are welcome, however, no order can be accepted unless all necessary arrangements have been made to the satisfaction of the Seller regarding import and export licenses and for the provision of payment.

Terms of payment: Orders from Buyers outside the United Kingdom are offered the following terms of payment:

- (a) Pre-payment against a Pro-Forma Invoice
- (b) Irrevocable Letter of Credit confirmed by a London Clearing Bank (or a London Merchant Bank subject to the prior written approval of such Bank by the Seller) unless other agreements have been made and agreed in writing. Letter of Credit should allow for part payments and shipments whenever necessary.
- (c) Credit Card - We accept all major credit cards.

Delivery and Delay: All orders for overseas shipment are accepted in accordance with the conditions hereinbefore contained, it being understood and agreed that delivery time is the Sellers estimate of the time by which it can have the necessary goods ready packed for shipment. The Seller cannot accept any responsibility for delays in despatch caused through non-availability of shipping space or other causes beyond its control.

Damage and/or Loss in Transit and Insurance:

- (a) The Seller accepts no responsibility for goods shipped un-insured and shall not be obliged to claim in respect of damage or loss where at the Buyer's request, insurance arrangements have been made other than the Seller's own open cover with its insurers for the time being in force.
- (b) Unless the Seller is specifically instructed otherwise goods will be insured only against

loss or damage in transit for the invoice value of the goods.

Import Licences: Where applicable, Buyer's order must specify the number, date of expiry and value of the Import Licence. It shall be the Buyer's responsibility to obtain all necessary Import Licences.

Bank Charges, Special Documentation, Fees & Duties: All consular and bank charges, import and custom duties and any taxes arising from or by virtue of the contract are the liability of the Buyer.
